

Vaccines Required For School Attendance^{1,2} – July 1, 2006 – July 1, 2007 State of Washington WAC 246-100-166

GRADE	Varicella⁴	DTaP/DTP/DT⁵	POLIO ⁶	MMR ⁷	HEP B ⁸
Kindergarten (ages 4-6)	1 dose given on or after the 1 st birthday ¹ OR Parent reported history of disease	5 doses Pertussis-containing vaccine recommended. The last dose must be received on or after the 4 th birthday. 4 doses acceptable provided the last dose is given on or after the 4th birthday		2 doses MMR	
Grade 1-5	Recommended ¹	Td/Tdap ⁵	4 doses recommended ^{1, 6}	recommended ^{1, 7} both given on or after the 1st birthday and at least 28 days apart	3 doses ^{1, 8}
(ages 7-13) not requ	not required	Pertussis is not required above			
Grade 6	1 dose given on or after the 1 st birthday ¹ OR Parent reported history of disease	Kindergarten (age 7) ———— 5 doses recommended ¹ The last dose must be received on or after the 4 th birthday. Booster dose of Td/Tdap			
Grade 7-9	Recommended ¹	recommended at age 11-12 ¹ 3 doses acceptable ³ provided the last dose is given on or			
Grade 10-12 (ages 14-18)	not required	after the 4th birthday⁴			3 doses recommended, ¹ not required

¹Refer to 2005 Recommended Childhood Immunization Schedule: http://devwww/cfh/lmmunize/documents/childschedule05.pdf

EXEMPTIONS:

MEDICAL exemption requires the signature of a licensed health care provider PERSONAL/RELIGIOUS exemptions require the signature of a parent/guardian

²The attendance of every child at every public and private school in the state and licensed day care center shall be conditioned upon the presentation before or on each child's first day of attendance of proof of either 1) full immunization*, 2) the initiation ofa schedule of immunization, or 3) a certificate of exemption as provided for in RCW28A.210.090.

* "Full immunization" or "fully immunized" is an immunization status where a child has been vaccinated at ages and intervals consistent with the national immunization guidelines, with immunizing agents against: Diphtheria; Tetanus; Pertussis (whooping cough):, Poliomyelitis; Measles (rubeola); Mumps; Rubella; Hepatitis B; Haemophilus influenzae type B disease; and Varicella for children under thirteen years of age, admitted to school or child care after July 1, 2006." (WAC 246-100-166)

Ages/Intervals:

- There is no maximum interval between doses. A vaccine series does not need to be restarted if there is an interval longer than the usual recommended interval.
- Minimum ages and intervals are an essential part of vaccine administration and apply to all vaccines and doses.
- The General Recommendations on Immunizations recommends that vaccine doses administered ≤ 4 days before the minimum interval
 or age be counted as valid. Washington State Immunization Program allows the use of the 4-day "grace period" ONLY for assessment
 of records and record review.

³Minimum acceptable doses are for children who were not fully immunized as infants or preschoolers and are exceptions to the recommended schedule for full immunization.

⁴Varicella (Chickenpox):

- Recommendation is for vaccine to be given on or after the 1st birthday (4 day grace applies).
- There is no varicella requirement for children 13 years of age or older regardless of grade in school.
- Children vaccinated on or after the 13th birthday need to receive 2 doses at least 28 days apart (4 day grace does not apply).
- Parental documentation of disease history is acceptable (Yes/No is required approximate date or age of disease is recommended).
- Laboratory evidence of immunity to varicella may be substituted for the varicella vaccine.

⁵DTaP/DT:

- Recommendation is for children to receive dose # 5 at 4-6 years of age (Kindergarten entry).
- Dose # 4 given on or after a child's 4th birthday is acceptable.
- Pertussis-containing vaccine is required for children attending Kindergarten (ages 4-6).
- Children who are past their 7th birthday should not be given DTP/DTaP vaccine. Such children can fulfill this requirement with 3 doses of Td or 2 doses of Td and 1dose of Tdap. (Tdap Is not licensed for children less than 10 years of age.)

⁶ Polio:

- Recommendation is for children to receive dose # 4 at 4-6 years of age (Kindergarten entry).
- 4 doses received before age 4 is acceptable.
- Dose # 3 given on or after a child's 4th birthday is acceptable.
- Routine vaccination of persons ≥ 18 years of age is not recommended.

⁷MMR:

- Recommendation is for children to receive dose # 1 on or after the first birthday (4 day grace applies) and dose # 2 at 4-6 years of age (Kindergarten entry).
- 2 doses of MMR vaccine is recommended and preferred but students can be considered fully immunized with 2 doses of measles-containing vaccine both given on or after the first birthday and at least 28 days apart (4 day grace does not apply).
- Laboratory evidence of immunity to measles, mumps and rubella may be substituted for the MMR vaccine. Immunity to one disease does not necessarily mean immunity to the other two diseases

⁸Hepatitis B:

Recommended Hepatitis B Vaccine Schedule

	Infant Sched	dule	
<u>Dose</u>	Usual	Minimum	
	Age	Interval	
1	0-2 months		
2	1-4 months	24 days	
3	6-18 months	8 weeks*	
	east 16 weeks (108 deast 24 weeks of ago		

Dose	Usual	Minimum
	Interval	Interval
1		
2	1 month	24 days
3	5 months	8 weeks*

Minimum ages/intervals IF dose # 1 given on or before 2 months of age:

The minimum interval between dose # 1 & dose # 2 is 24 days (28 day month minus 4 day grace).

The minimum interval between dose # 2 and dose # 3 is 52 days (8 weeks minus 4 day grace).

The minimum age for dose # 3 is 24 weeks (6 calendar months minus 16 days – includes 4 day grace).

• Minimum ages/intervals for children **not** vaccinated as infants:

The minimum interval between dose # 1 and dose # 2 is 24 days (28 day month minus 4 day grace).

The minimum interval between dose # 2 and dose #3 is 52 days (8 weeks minus 4 day grace).

The minimum interval between dose # 1 and dose #3 is 108 days (16 weeks minus 4 day grace).
